WHAT IS CLAIMED IS:

1. A composition comprising an immunogenic peptide having a supermotif which allows the immunogenic peptide to bind more than one HLA molecule, the immunogenic peptide having between about 9 and about 10 residues;

a first conserved residue at the second position from the N-terminus being P; and

a second conserved residue at the C-terminal position being selected from the group consisting of M, I, and an aromatic residue.

10

2. The composition of claim 1, wherein the immunogenic peptide is selected from the group consisting of SEQ. ID. Nos. 1-21.

3. A method for inducing a CTL response in a patient, the method comprising administering to the patient a therapeutically effective dose of the immunogenic peptide of claim 1.
